Quiz Instructions

:::

Question 1 10 pts

Which of the following are disadvantages to file processing systems?

☐

File systems can routinely handle all the data in main memory.

☒

Operating systems provide only a password mechanism for access control.

☒

We need special programs to answer each question a user may want to ask about the data.

☒

We must ensure the data is restored to a consistent state if the system crashes while changes are being made.

☒

We must protect the data from inconsistent changes made by different users accessing the data concurrently.

:::

Question 2 10 pts

Match the responsibility to the appropriate component of the DBMS architecture.

Recovery manager

Ensures transaction atomicity

Transaction manager

Controls the execution of the transactions

Lock managers

Grants and releases locks appropriately

Question 3 10 pts

The person that has central control over a DBMS is called a DataBase Administrator (DBA)

☒

True

☐

False

:::

Question 4 10 pts

Match the type of consistency constraint with its definition.

Domain constraints

A domain of possible values

Referential integrity

Ensuring that a value that appears in one table also appears in another

Assertions

Any condition that a database must satisfy

Authorization

Types of access users are permitted to have

:::

Question 5 10 pts

An attribute takes a null value when the value of the attribute is computed to be zero.

☐

True

☒

False

:::

Question 6 10 pts

What describes the kinds of operations or transactions that will be performed in the database?

☐

Logical design phase

☒

Specification of functional requirements

☐

Physical design phase

☐

Conceptual design phase

:::

Question 7 10 pts

Which of the following are components of the storage manager?

☐

DDL interpreter

☐

Query manager

☐

DML compiler

☒

Transaction manager

☒

Authorization and integrity manager

☒

File Manager

Buffer Manager

Question 8 10 pts

I've just added a new person to the Employee database. Which of the following have I affected?

Database physical schema.

Database instance.

Database logical schema.

Question 9 10 pts

A query is a statement requesting the retrieval of information.

True

False

Question 10 10 pts

Data mining refers loosely to the process of semiautomatically analyzing raw input such as newspapers and field data to create reports.

True

False
